Webinar series

PAIN MANAGEMENT IN CANCER CARE

SPCC has developed a webinar series on "Pain management in cancer care" based on the needs of daily clinical practice.

Oncologists, when treating cancer, should be aware of the practical consequences of pain on patients, knowing the definition of pain, possible ways to treat it and how to manage it using opioids.

All these topics will be discussed during the webinars by a moderator, who will introduce a clinical case, and two experts who will present their different perspectives.

PAIN AWARENESS IN CANCER CARE
